# Is Used In Widget

The Is Used In Widget shows you where in the current channel the current content item is used. It is important to know where a content item is used in case you want to modify it but are not sure what effect this has on other parts of the channel. For example, if you delete an image from the Content Repository that is used elsewhere in the channel, the image will subsequently be unavailable everywhere it is used. The Is Used In Widget shows where all content types in XperienCentral are used. This includes the following:

- Page
- Page in the Content Repository
- Page Section
- Article
- Custom Content Type
- Image
- Download

In the top section of the Is Used In Widget, the number of content items that use the current content item are shown with the message "<content item name> is used in X content items". In the bottom section of the Is Used In Widget, the content items that use the current content item are shown. The name of the content item is shown prefixed with the icon used within XperienCentral to represent the content item type. The names of the content items themselves are links to that content item. For example:

To expand the widget to see more content items, hover the mouse over the middle of the bottom part of the widget until the expand icon appears. For example:

Is Used In

'Solutions' is used in

9 content items

- Best Next Actions
- Content Management
- Content Recommendation
- Email automation
- MultiChannel Forms
- Product Recommendation
- Profiling & Personalisatie
- Wat biedt GX voor Content Manag...

To navigate to a content item that uses the current content item, click its title. You will then navigate to that content item where you can inspect how it uses the original content item. For example, if you click a reference to a page from an image content item, you will navigate to the page and there you can see the image element that is using the image.

⚠️
- Because of the way that XperienCentral tracks content items for "is used in" statistics, the results may not be always be 100% accurate because a reindex has not yet occurred.
- You can also search for content items on the basis of "is used in" statistics using Advanced Search.

What is Using?

A content item is considered to be used in another content item under the following circumstances:

Content Item	What can use it?	How it is used
Page	Page, page section, article	A hyperlink to the page.
Page section	Page, page section, article	The page section is assigned to a page or there is a link to the page section from a page, page section or article.
Image in the Content Repository	Page, page section, article	The image appears in an Image element on a page, page section or article.
Article	Content Overview element, page, page section, article	The article is referenced by a Content Overview element or a link on a page, page section or article.
Download in the Content Repository	Page, page section, article	The download is referenced by one of the following • A Download element on a page, page section or article • A Dynamic Content Overview element on a page, page section or article • A Content Overview element on a page, page section or article

⚠️

⚠ A content item can potentially be used in a Dynamic Content Overview, however this does not count in the using statistics because it is not known at any given time whether it definitely is being used.
